 → do all the learning }

IDE / tools } write the actual code }

Python

what?  
↳ why?

How?

What is Python }  
[ Programming Language ]

Python } → Programming language }

↳ ① compiled

② Interpreted/scripting

---

Compiled PL

① → instruction  
(code)

② → code

①  
compilation  
(Byte code)

② execution happens

byte form (01- -)  
↓ compiled

} C++/Java

Interpreted

① → code

Execution

line by line interpretation  
and then execution

} check + execution

Python

Interpreted PL } comparatively slower runtime compared to  
compiled PL

python } interpreted PL ✓

Data science / AI / Gen AI

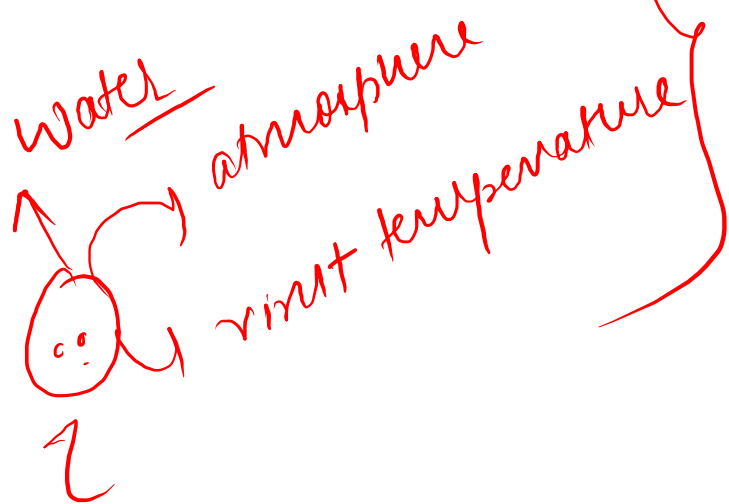

① Python

What / Why?

N/w scripts ② Very easy

How?

IDE

# integrated development environment

- ① syntax suggested
- ② warning
- ③ better project structure and access

vs code
