

Type of Data

sequence } group of elements

→ string }

group/sequence of characters }

name = ('Vishal' }

↗

name = Vishnu
0 1 2 3 4 5

→

} name[4] → w
name[5] → a }

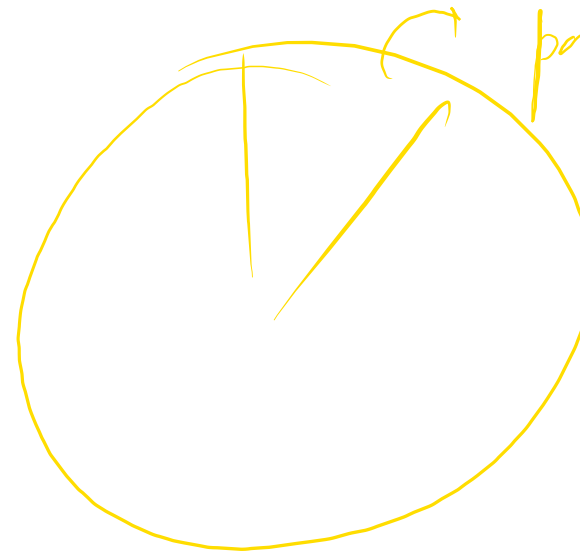

↖ [0, length-1]
[-length, -1]

String } Immutable

a = 'Vishna'
b = 'Vishna' X

- ① immutable } easy and safe to work in the concurrent env.
- ② saving space

String slicing

portion of the pizza/cake
slice

str = ('vishwa mohan')
0 1 2 3 4 5 6 7 8 9 10 11

slice of a string

str[a:b] \rightarrow [a, b-1] will be the slice

Array data type

↳ collection of elements

↳ ordered (index)

↳ Mutable

↳ Array

↳ different type]

tuple

← immutable

ordered
sequence
different type of data

Dictionary \rightarrow ① (key, value) Map (Same)

② unordered

③ Mutable

④ key has to be unique

⑤ Heterogeneous data

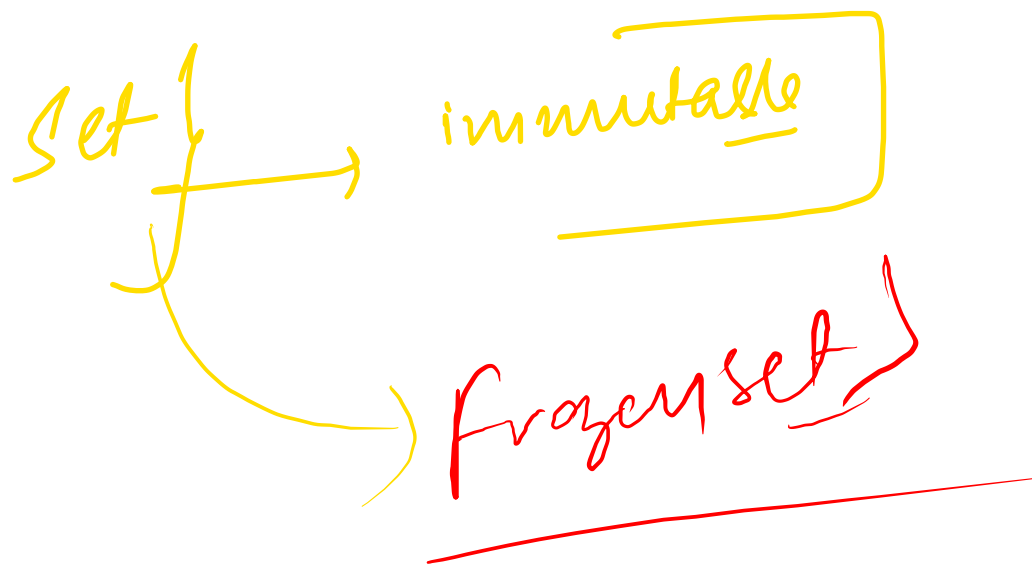

set } → ① no duplicates | elements are unique

② Mutable

③ Un-ordered

④ Heterogeneous

multiple data type

Type casting

Type 1 \rightarrow Type 2
